What I contribute

I turn customer problems into concrete product improvements. I find the need behind a request, define the scope and work with developers from specification through testing and customer feedback. Nine years at iPaper, from support to Product Owner, give me both the customer perspective and a detailed understanding of the technology. I also build websites, an app and reusable workflows with AI.

Selected results

Automation	Expanded Enrichment Automation with a developer so a shared solution could support more customer needs and data sources. The tool makes PDF catalogues shoppable through product links and items that can be added to a cart.
Price formatting	Specified configurable currency placement and trailing-zero controls. Both shipped and received positive customer feedback through Customer Care.
Practical AI	Built websites with Claude and ChatGPT and a shopping-list app with Claude. Develop reusable Claude skills and AI loops for review and refinement.

What I want to work on

- **Product Ownership and Product Management:** Understand needs, prioritise and follow product improvements through to users.
- **Working closely with people:** Listen to customers, users and developers and bring their perspectives together around a useful solution.
- **Technology that makes a difference:** Create useful, accessible solutions and use AI to explore, build and improve.

Experience at iPaper

Nov 2017 - 2026 **iPaper** B2B SaaS, Aarhus

Sep 2023 - 2026
Product Owner
Specified checkout, product views, accessibility and Horizon's energy-rating system. Coordinated developers, management and support in a Scrum environment.
